Threshold Maps for Infectious Disease Risk

Notes and assumptions

1. All 0s and NAs are excluded before calculating top−percent thresholds.
2. The plotted maps also exclude all 0 and NA cells.
3. First plot = Top 5% of the filtered distribution.
4. Second plot = Top 10% of the filtered distribution.
5. Third plot = Top 25% of the filtered distribution.

All thresholds are based on the Figure 3B infectious disease risk workflow.
