

### A. Figure 3A overlay

Top 5% of observed EID risk over summed binary pressure (weighted model output with current reporting effort)

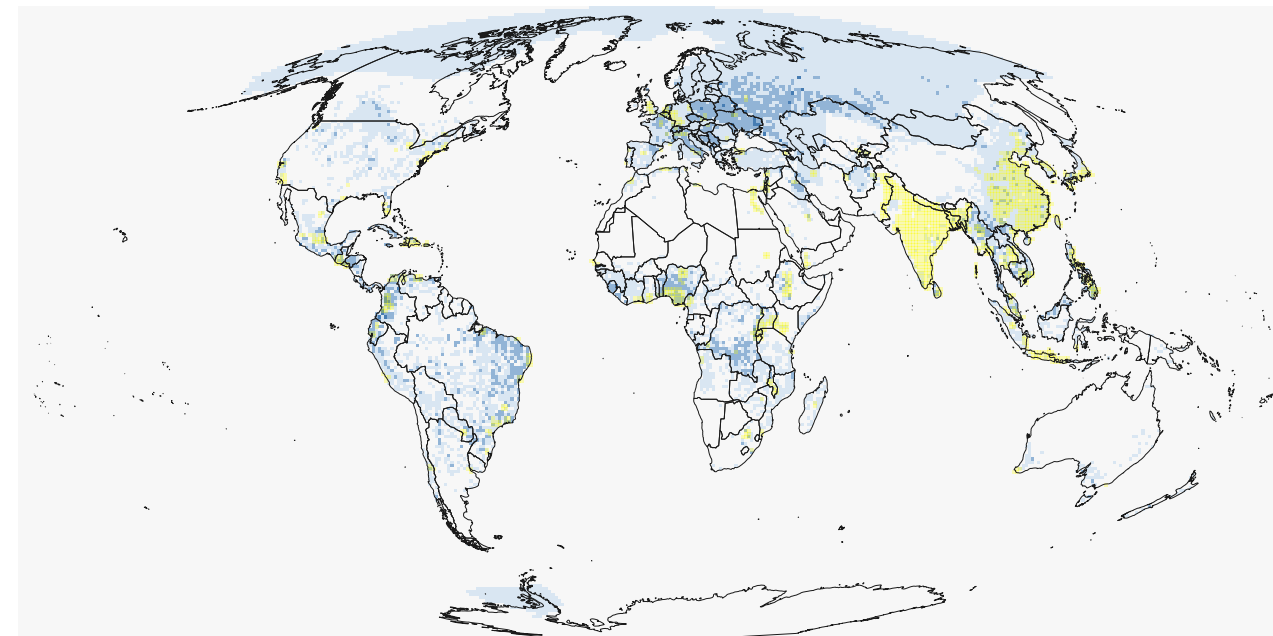

Summed  
binary layers

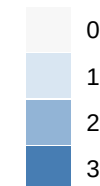

The Figure 3A top 5% subset is calculated after excluding 0s and NAs from the Figure 3A risk surface.

### B. Figure 3B overlay

Top 5% of bias-corrected EID risk over summed binary pressure (weighted model output reweighted by population)

Summed  
binary layers

The Figure 3B top 5% subset is calculated after excluding 0s and NAs from the Figure 3B risk surface.
